

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

Claims 1-26. (Cancelled)

27. (Currently Amended) A method of weather modification using "Royal Rainmaking Technology" to cause rainfall comprising:

Triggering, which is to activate cloud formation and enrich newborn clouds from an atmosphere having humidity not less than 60% at an altitude up to 7,000 feet, wherein sodium chloride is dispersed from aircraft into a volume of air at a level of cloud formation or a few thousand feet above the level of cloud formation or convective condensation level (CCL), at a distance upwind to a designated target area;

Fattening, which is to promote raindrop formation and building up of cloud volume, wherein calcium chloride is dispersed from aircraft into the updraft portion of clouds at a level above the cloud base at an altitude of about 8,000 feet;

Attacking, which is to initiate rainfall, using the "Sandwich Technique" wherein sodium chloride and urea are simultaneously dispersed at mid-cloud level and at the cloud base, respectively, wherein the sodium chloride and urea are dispersed at a 45 degree angle relative to one another; and

Enhancing, which is to enhance volume of rainfall onto the designated target area, and to prolong rain duration, wherein dry ice is further dispersed from aircraft at about 1,000 feet below the cloud base.
